To the manufacturers of
space heating appliances for solid fuels

Frankfurt, 16. February 2023

Invitation to an information event on environmental sustainability on 23 March 2023

Dear Manufacturers, dear Experts, dear Ladies and Gentlemen,

on behalf of CEFACD and HKI we invite you to an **informative meeting on the new requirement for environmental sustainability information according to EN 16510 series of standards "Residential solid fuel burning appliances"**.

With the publication and upcoming harmonisation of the EN 16510-x series of standards, the preparation of an environmental declaration for fireplaces for solid fuels will become mandatory as part of the declaration of performance.

In this event, we would like to explain the requirements of the standard for an environmental declaration and be available to answer your questions.

We will also introduce you to the tool developed by HKI in cooperation with a service provider to enable the preparation of the required "Environmental Sustainability Information".

The publication of the parts 1, 2-1, 2-2, 2-3, 2-4 and 2-6 of the EN 16510 series by CEN (and DIN) has already taken place. We expect harmonisation by the European Commission and publication in the Official Journal of the European Community within the first half of this year.

This will be followed by a transitional period (set by the European Commission) during which appliances that have been type-tested according to the old standards such as EN 13240 and also according to the new standards of the EN 16510 series can be placed on the market. After the end of the transition period, the appliances must be placed on the market according to the new EN 16510 series.

The event will take place as an online meeting on.

23 March 2023 from 10:00 to 12:00 CET.

Please feel free to forward this information to interested parties!

In order to ensure a smooth and stress-free web conference, we kindly ask you to observe the following rules:

- **Please display your name and the institution/organisation you represent during the meeting.**
- Please switch off your camera and microphone after entering the video conference in order to simplify the technical implementation of the event as much as possible.
- Please announce your questions or comments in the discussion via the chat window, which can be found in the video conference via the speech bubble symbol. You can formulate your contribution directly in the chat window or enter "Question" and make your contribution verbally when called upon by the moderator.
- When you are called upon, please unlock your microphone and if you like, turn on your camera.
